

## RGK42 Trauma Straps

**Material:** Polyester Webbing and Steel Fittings

**Features:**

Ridgegear Suspension Trauma Safety Strap helps prevent the effects of suspension trauma after a fall

Allows worker who is suspended to stand up in their harness to relieve pressure on the groin area

Can be fitted to all Ridgegear harnesses

Easy to fit to your existing Harnesses

Extremely small and will not get in the way

Very Easy To Use and adjust in a matter of seconds

This new exciting innovation is simple yet effective for use in conjunction with fall arrest harnesses. It eases the discomfort to the user whilst suspended from a lanyard after a fall.

The leg straps of a conventional harness do not prevent the webbing straps from cutting into the groin area during suspension, and loss of circulation to the legs and feet is often likely. Standing on the Trauma strap relieves the pressure to the groin, and releases the tension within the webbing. The Trauma strap is fitted to the harness prior to use

**Note: It must be understood that the Trauma strap in no way acts as part of a fall arrest or rescue plan. An adequate rescue system must always be in place**
