

Gas & Flame Detection

3M[™]Oldham BM 25

Transportable Gas Detection

- Detect up to 5 gases simultaneously
- 103 dB at 3 feet audible alarm
- Ultra-bright flashing signal at 360° •
- Run time of 170 hours
- Resistant to harsh environment
- Easily transportable less than 15 lbS
- 30 devices per network •
- 16 independent networks
- More than 0.5 mile RF line of sight
- Data acquisition to a controller

The BM 25 packs the benefits of a fixed system area monitor into a rugged, user-friendly and transportable instrument.

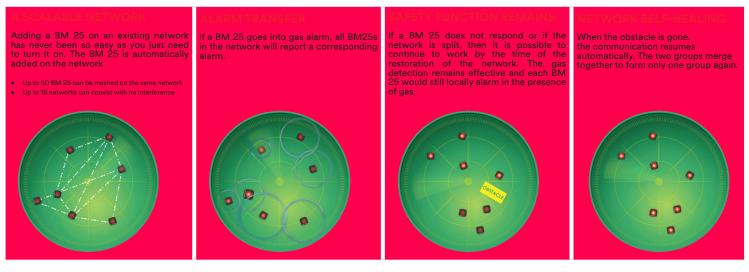

((1))

It was designed to detect one to five gases for mobile or temporary work applications, team protection, area surveillance, or places where fixed detection systems are not suitable.

3M[™]Oldham BM 25

Transportable Gas Detection

Available as an option, the radio communication allows several BM 25 devices to communicate on the same network or to send information wirelessly to a controller.

HOW DOES THE MESH NETWORK, WORK?

Hosts are connected peer-to-peer manner, forming a net-like structure

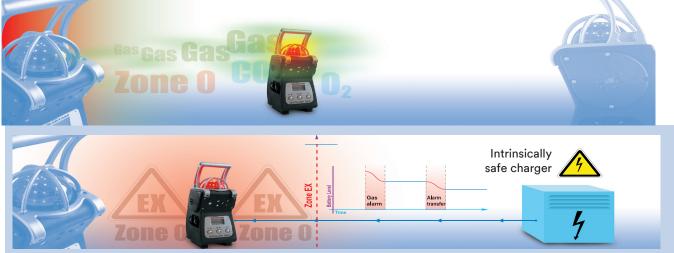

- No central hierarchy
- Each node can receive, send and relay data
- If a node is down, it goes through another route
- Maximum distance between two communicating devices is 0.6 mile line of sight

BENEFITS OF MESH TOPOLOGY:

- Fast and simple deployment
- High coverage versatility
- High fault tolerance
- Significantly reduces installation and network operating costs

ALARM & DATALOGGING CAPABILITIES:

- 360° flashing sign^al
- 103 dB at 3 feet audible alarm.

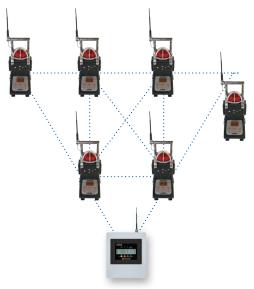

Trickle charge for long term area monitoring

SMARTWIRELESS HMI

BM 25s send fault status, alarm status and gas measurements to the controller. As soon as one BM 25 fires an alarm, the controller relays the information to all BM 25s on the same network that then turn in Alarm Transfer mode.

MX40 CONTROLLER

The SmartWireless® MX 40 Controller provides operator interface to the network and real time status display of all network devices. Flexible and expandable, a MX 40 network consists of any combination of (up to 16) BM 25 wireless and/or (up to 32) wireless and/or wired sensors, one or more control panels, and alarm warning devices. Command functions include alarm reset, alarm acknowledge, alarm test and radio silence. The control panel displays real time gas concentrations, field device status, battery levels, network RF signal quality and fault diagnostic conditions. Display indications include alarm status, channel, gas reading, battery life & link signal strength. Standard features include removable SD card with datalogging.

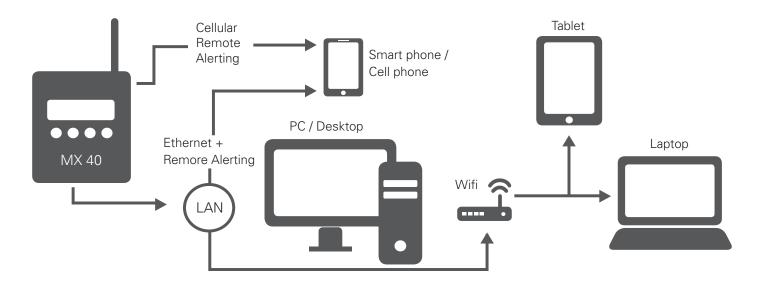

The Model MX 40 also allows for expanded use of Oldham addressable I/O modules that include a 4-channel 4-20mA input module (DA-4), a 4-alarm relay output module (RL-4), a 4-channel 4-20mA output module (AO-4), and a 4-relay contact input module (DI-4). Oldham modules can be mounted within the main system enclosure or installed remotely to simplify field wiring.

SITEWATCH REMOTE MONITOR

SiteWatch is an advanced networking device that provides remote access to any Oldham gas detection system via Ethernet or cellular communication. The SiteWatch Ethernet version provides an IP addressed web page that can be accessed via any web browser and both the Ethernet and Cellular versions provide automated emails for all alarm and fault conditions instantaneously. SiteWatch technology can be embedded into the Oldham or Detcon Model MX 40 and MCX-32 wireless controllers.

The SiteWatch allows web browser access to real time data from the gas detection system that includes: detector type, location/name, gas concentration, gas type and alarm status. In addition, when used with Detcon SmartWireless systems, the data includes battery life and link quality of all devices in the network.
