

# PRODUCT DATA SHEET

Product ID                    RGA3  
Description:                 Fall Arrest Block - 15m

Accredited to:             EN 360: 1992  
Line material:             5mm galvanised cable  
Case material:             Alloy  
Connectors:                Double action high tensile steel alloy  
Weight:                     10.5kg  
Max. user weight:        136kg  
Max. force:                <6kN  
Features:                    Fall indicating connector

The RGA3 is a robust fall arrest block with a long working length and heavier construction. The RGA3 has been used successfully by the offshore industry for many years.

The carrying handle of the RGA3 is part of the cast alloy housing and can be connected to the anchorage point using soft slings or a connector. The RGA3 is suitable for use in most industries to provide protection in work areas with overhead anchorage points.

The RGA3 can be supplied with galvanised or stainless steel wire cable.
